SECTION I

INTRODUCTION

1. Scope.

This manual lists the repair parts, special tools, and maintenance supplies required for the performance of organizational maintenance of Engine, Aircraft, Reciprocating, R985AN39, R985AN39A (Pratt and Whitney).

2. General.

This Repair Parts and Special Tools List is divided into the following sections:

a. *Prescribed Load Allowance (PLA)—Section II.* A composite listing of the repair parts, special tools having quantitative allowances for initial stockage at the organizational level. This section is arranged by functional group in federal stock number sequence.

b. *Repair Parts—Section III.* A list of repair parts authorized for the performance of maintenance at the organizational level in figure and item number sequence. This section is arranged by functional groups in disassembly order and indented when required to indicate relationship to the next higher assembly. The illustrations in this section will appear immediately preceding each figure of text.

c. *Special Tools—Section IV.* A list of special engine tools authorized for the performance of maintenance at the organizational level in figure and item number sequence. The illustrations in this section will appear immediately following the text portion.

d. *Federal Stock Number and Reference Number Index—Section V.* A list of federal stock numbers in ascending numerical sequence followed by a list of reference numbers in ascending alphanumerical sequence, cross-referenced to the illustration figure and item number. This edition contains a Supplementary Federal Stock Number and Reference Number Index.

3. Explanation of Columns.

The following provides an explanation of columns in the tabular lists in sections II, III, and IV.

a. *Source, Maintenance, and Recoverability Codes (SMR), Column 1.*

- (1) Source code, indicates the selection status and source for the listed item. Source codes used are:

Code	<i>Explanation</i>
P	Repair Parts, Special Tools and Test Equipment supplied from GSA/DSA, or Army supply system, and authorized for use at indicated maintenance categories.
P2	Repair Parts, Special Tools and Test Equipment which are procured and stocked for insurance purposes because the combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system.
P9	Assigned to items which are NSA design controlled: unique repair parts, special tools, test, measuring and diagnostic equipment, which are stocked and supplied by the Army COMSEC Logistic System and which are not subject to the provisions of AR 380-41.
P10	Assigned to items which are NSA design controlled: special tools, test, measuring and diagnostic equipment for COMSEC support, which are accountable under the provisions of AR 380-41, and which are stocked and supplied by the Army COMSEC Logistic System.
M	Repair Parts, Special Tools and Test Equipment which are not procured or stocked, as such, in the supply system, but are to be manufactured at indicated maintenance levels.
A	Assemblies which are not procured or stocked as such, but are made up of two or more units. Such component units carry individual stock numbers and descriptions, are procured and stocked separately and can be assembled to form the required assembly at indicated maintenance categories.
X	Parts and assemblies that are not procured or stocked because the failure rate is normally below that of the appli-

<i>Code</i>	<i>Explanation</i>
	cable end item of component. The failure of such part or assembly should result in retirement of the end item from the supply system.
X1	Repair parts which are not procured or stocked. The requirement for such items will be filled by the next higher assembly or component.
X2	Repair Parts, Special Tools, and Test Equipment which are not stocked and have no foreseen mortality. The indicated maintenance category requiring such repair parts, will attempt to obtain the parts through cannibalization or salvage. The item may be requisitioned with exception data, from the end item manager, for immediate use.
G	Major assemblies that are procured with PEMA funds for initial issue only as exchange assemblies at DSU and GSU level. These assemblies will not be stocked above the DS and GS level or returned to depot supply level.
(2)	Maintenance code, indicates the lowest category of maintenance authorized to install the listed item. Capabilities of higher maintenance categories are considered equal or better. Parts which require manufacture or assembly at a category higher than that authorized for installation will indicate in the source column the higher category e.g., "MF", "AF", "MH". The maintenance level codes are:

<i>Code</i>	<i>Explanation</i>
C	Crew or operator maintenance.
O	Organizational maintenance.
(3)	Recoverability code, indicates whether unserviceable items should be returned for recovery or salvage. Repair parts and assemblies not assigned a recoverability code shall be considered non-recoverable, however, repairs may be accomplished on such items to the extent that maintenance instructions and parts are available to the maintenance category authorized to remove, repair, and replace the item. Recoverability codes are:

<i>Code</i>	<i>Explanation</i>
R	Applied to repair parts, (assemblies and components) special tools and test equipment which are considered economically reparable at direct and general support maintenance levels. When the item is no longer economically reparable, it is normally disposed of at the GS level. When supply considerations dictate, some of these repair parts may be listed for automatic return to supply for depot level repair as set forth in AR 710-50. When so listed, they will be replaced by supply on an exchange basis.
S	Repair Parts, Special Tools, Test Equipment and assemblies which are economically reparable at DSU and GSU activities and which normally are furnished by supply on an exchange basis. When items are determined by a GSU to be uneconomically reparable, they will be evacuated to a depot for evaluation and analysis before final disposition.
T	Higher dollar value recoverable repair parts, special tools and test equipment which are subject to special handling and are issued on an exchange basis. Such items will be repaired or overhauled at depot maintenance activities only. No repair may be accomplished at lower levels.
U	Repair Parts, Special Tools and Test Equipment specifically selected for salvage by reclamation units because of precious metal content, critical materials, high dollar value or reusable casings or castings.

b. *Federal Stock Number, Column 2.* This column indicates the federal stock number assigned to the item and will be used for requisitioning purposes. An item in one of the following categories will not be published with a federal stock number: Items source coded A, M, X1, or X2.

c. *Description, Column 3.* This column indicates the federal item name and any additional description of the item required. There are two subcolumns for column 3, which reflects the reference number and usable on code data. The part number or other reference number followed by the applicable five-digit federal supply code for manufacturer, in parentheses, will appear in the

subcolumn located to the extreme left of the description column.

d. Unit of Measure (U/M), Column 4. A two-character alphabetical abbreviation indicating the amount or quantity of the item upon which the allowances are based, e.g., FT, EA, PR.

e. Quantity Incorporated in Unit, Column 5. This column indicates quantities required for one assembly only, including instances when similar assemblies are broken down together. When attaching parts are shown as attaching two or more items, the quantities of the attaching parts are those necessary to attach only one of the items. A "V" appearing in this column in lieu of a quantity indicates that a definite quantity cannot be shown, e.g., shims, spacers.

f. Fifteen-Day Organizational Maintenance Allowance, Column 6:

- (1) The allowance column is divided into four subcolumns. Indicated in each subcolumn, opposite the first appearance of each item, is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the applicable allowance columns. Items authorized for use as required, but not for initial stockage are identified with an asterisk * in the allowance column.
- (2) The quantitative allowances for organizational level of maintenance represents one initial prescribed load for a 15-day period for the number of equipments supported. Units and organizations authorized additional prescribed loads will multiply the number of prescribed loads authorized by the quantity of repair parts reflected in the density column applicable to the number of items supported to obtain the total quantity of repair parts authorized.
- (3) Organizational units providing maintenance for more than 100 of these equipments shall determine the total quantity of parts required by converting the equipment quantity to a decimal factor by placing a decimal point before the next to the last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for

51-100 equipments is 40; for 150 equipments multiply 40 by 1.50 or 60 parts required. The basis of issue for authorized special tools, test, and support equipment is the number of end items of equipment supported.

- (4) Subsequent changes to allowances will be limited as follows: No change in the range of items is authorized. If additional items are considered necessary, recommendations should be forwarded to Commanding General, U. S. Army Aviation Systems Command (USAAVSCOM), P.O. Box 209, St. Louis, MO 63166, for exception or revision to the allowance list. Revisions to the range of items authorized will be made by USAAVSCOM based upon engineering experience, demand data, or The Army Equipment Records System (TAERS) information.

Note: The Roman numeral "C," designating units of 100, is utilized to reflect organizational maintenance quantities in excess of 999, as shown in the following examples:

Maintenance quantity	Manual appearance
1100	11C
1200	12C
1295	12C
1545	15C

g. Illustration, Column 7. This column is divided as follows:

- (1) Figure Number, Subcolumn 7a. This column indicates the figure number of the illustration in which the item is shown. An alpha designator in this column indicates a specific functional group as follows:

BULK-Functional Group 60
MSUP-Functional Group 70

- (2) Item Number, Subcolumn 7b. This column indicates the callout number used to reference the item in the illustration.

4. Special Information.

a. Description, Column 3:

- (1) Oversize and undersize parts, such as studs, bushings, etc., are listed immediately after the standard size part and in the same indent. The degree of oversize or undersize is stated in the description. These parts are not index numbered, nor is a required quantity shown.

(2) When an item has been replaced, issue will continue to be made until existing stocks become exhausted except in the case when replacement is limited to one-way use. To insure complete exhaustion of stock on hand and if it is acceptable to use a replaced item, the replaced item should be requisitioned. To denote one or two-way replacement, mnemonic codes will be used in the description as follows: The replaced item(s) will always contain the mnemonic code RPL-BY. The replacing item, if it is a two-way replacement, will contain the mnemonic code RPLS. If it is a one-way replacement, no code will be used. Additional mnemonic codes (paragraph 6), are used to reflect the status and relationship of items similar or related items used in the end article e.g., OBS-BY, ASSYFR, OBS-AFT-CMPL-W.

(3) When details of an assembly are shown on another text page, the description of that assembly is followed by a notation stating where these details can be located. Example: "A30258-4 Carburetor, Float. See figure 21 for breakdown." The parts that make up the carburetor float will be found in the text listing for figure 21.

(4) Attaching parts are listed immediately after the part(s) they attach and in the same indent. They are separated from the part(s) by the words "attaching parts." When they attach an assembly which is broken down to show detail parts, the attaching parts are separated from the details of the assembly by the symbol "___ * ___." Details of the assembly then are indented one space to the right of their next higher assembly, which appears above the attaching parts.

b. *Usable on Code, Column 3.* This column will contain the basic designator and provides for a maximum of seven series (models) applications. The subcolumns will contain the series (models) number(s) opposite the first line of nomenclature of each item listed to indicate the usable application(s) of that item. Note: A numerical system is used to reflect specific engine(s) application for each item in the engine repair parts and repair kits functional groups of section III, and special tools part of section IV. Cross-references of nu-

merical system to specific engine application is as follows:

- 1-denotes R985AN39A engine.
- 2-denotes R985AN39 engine.

When an item has limited effectiveness within a model, the limitation will be indicated by an entry following the item description or footnote reference, e.g., Code A, Code B. Application of nonsignificant items such as bolts, screws, washers, nuts, clamps, clips, etc., will not be shown unless application is necessary to clearly show proper usage with other significant items.

c. *Explanation of Terminology.* Matched Components, Do Not Stock Separately. Used to indicate the items constituting a matched set which must be issued and installed as a set and must not be broken down into components when issued or installed.

d. *The Following Publications Pertain to This Equipment and Its Components:*

TM 55-405-5	Army Aviation Maintenance Engineering Manual: Aircraft Engines
TM 55-405-6	Army Aviation Maintenance Engineering Manual: Aircraft Maintenance Tools
TM 55-405-7	Army Aviation Maintenance Engineering Manual: Shop Practices
TM 55-1510-203-20P	Organizational Maintenance Repair Parts and Special Tools List
TM 55-2810-224-24	Organizational, DS, and GS Maintenance Manual: R985AN39 and R985AN39A Engines

e. *The Illustrations in This Manual Are Identical to Those Published in the -34P.* The -34P illustrations are given for a better understanding of the parts relationship; however, only those parts assigned a maintenance code "O" are listed in the tabular portion and only those parts are authorized for requisitioning from this manual. Illustrations which do not contain maintenance significant parts for organizational maintenance will not appear in this manual. Text page and illustration of the preceding figure will have the phrase "Figure xx not applicable to TM 55-2810-224-20P."

f. *Actions Change Codes Indicated in the Left-Hand Margin of the Text Page Denote the Following:*

- F-Indicates a change in FSN only.
- N-Indicates an added item not included in previous publications.
- C-Indicates a change in data.

5. How to Locate Repair Parts.

a. *When Federal Stock Number or Reference Number is Unknown:*

- (1) *First.* Using the table of contents, determine the assembly group; i.e., engine assembly, etc., within which the repair part belongs. This is necessary since illustrations are prepared for the assembly groups and listings are divided into the same groups.
- (2) *Second.* Find the illustration covering the assembly group to which the repair part belongs.
- (3) *Third.* Identify the repair part on the illustration and note the illustration figure and item number of the repair part.
- (4) *Fourth.* Using the Repair Parts Listing, find the assembly group to which the repair part belongs and locate the illustration figure and item number noted on the illustration.

b. *When Federal Stock Number or Reference Number is Known:*

- (1) *First.* Using the Index of Federal Stock Numbers or Reference Numbers, find the pertinent federal stock number or reference number. This index is in ascending federal stock number and alpha-numerical sequence, cross-referenced to the illustration figure and item number.
- (2) *Second.* Using the Repair Parts Listing, find the assembly group of the repair part and the illustration figure and item number referenced in the subject index.

6. Abbreviations (Mnemonic Codes).

The following abbreviations and mnemonic codes are used:

A/A	Any acceptable
AMEND	Amendment(s)
AN	Air Force-Navy
ANPT	Aeronautical national taper pipe thread
APPLTO	Applicable to
ASSYFR	Assemble from
AV	Twenty-five
AWG	American wire gage
AX	Twenty
BE	Bale
BKDN	Breakdown
BRKDWN	Breakdown into
BT	Bottle
BTU	British thermal unit(s)
BX	Box
CC	Cubic centimeter(s)
CFM	Cubic feet per minute
CFS	Cubic feet per second
CI	Cubic inch
CN	Can
CNSWTH	Consolidated with

C/O	Consist of (component of)
CP	Candle power
CRES	Corrosion resistant steel
CW	Continuous wave(s)
DEG	Degree(s)
DR	Drum
EA	Each
FIG	Figure
FMC	Federal manufacturer's code
FT	Foot
GL	Gallon
GPH	Gallons per hour
GR	Gross
HD	Hundred
IN	Inch
INTRCH	Interchangeable with
KC	Kilocycle(s)
KQCA	Kits and quick change assemblies
KT	Kit
KW	Kilowatt(s)
LB	Pound
LH	Left-hand
LL	Fifty
MAKEFR	Make from
MASTER	Master item
MIN	Minimum
MSUP	Maintenance supplies
MWO	Modification work order
MX	Thousand
NAS	National aircraft standard
NC	American national coarse thread
NEF	American national extra fine thread
NF	American national fine thread
NHA	Next higher assembly
NS	American national special thread
O/A	Over-all
OBS-AFT	Obsolete after compliance with
CMPL-W	Obsolete by
OBS-BY	Obsolete
OBSLT	Obsolete
PC	Piece
PG	Package
PK	Pack
PORM	Plus or minus
PRFITM	Preferred item
PSI	Pounds per square inch
PT	Pint
REWKTO	Rework to
RH	Right-hand
RL	Roll
RMKS	Remarks
RPL-BY	Replaced by
RPLBLE	Replaceable item
RPLS	Replaces
SE	Set
SF	Square foot
SH	Sheet
SI	Square inch
SL	Spool
SPEC	Specification(s)
ST	Stick
SUB-IS	Substitute is
SUBFOR	Substitute for
TCTM	Time compliance technical manual

TRNSTO	Transfer to
TU	Tube
TYPDSG	Type designation
U/O	Used on
USBL-EFF	Usable effectivity
USE-AFT-	
CMPL-W	Use after compliance with
USE UNTIL	
CMPL-W	Use until compliance with
U/W	Used with
W	Watt(s)
W	Wide, width
W/	With
WHEN EXHTD	
RQTN NHA	When exhausted requisition next higher assembly
W/O	Without
XX	Ten
